

Project Report on

Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau

1. INTRODUCTION

1.1 Project Overview

UNESCO World Heritage Sites are places recognized for their cultural or natural importance. These sites tell the story of human history and natural wonders. Our project focuses on exploring data related to these sites using Tableau, a powerful data visualization tool. The goal is to help people understand patterns, insights, and trends in heritage preservation across the world.

1.2 Purpose

The purpose of this project is to analyze and visualize heritage site data in an interactive and meaningful way. By using Tableau, we aim to bring awareness about world heritage, show which countries have the most sites, highlight endangered sites, and help in understanding how cultural and natural heritage is spread across the globe.

2. IDEATION PHASE

2.1 Problem Statement

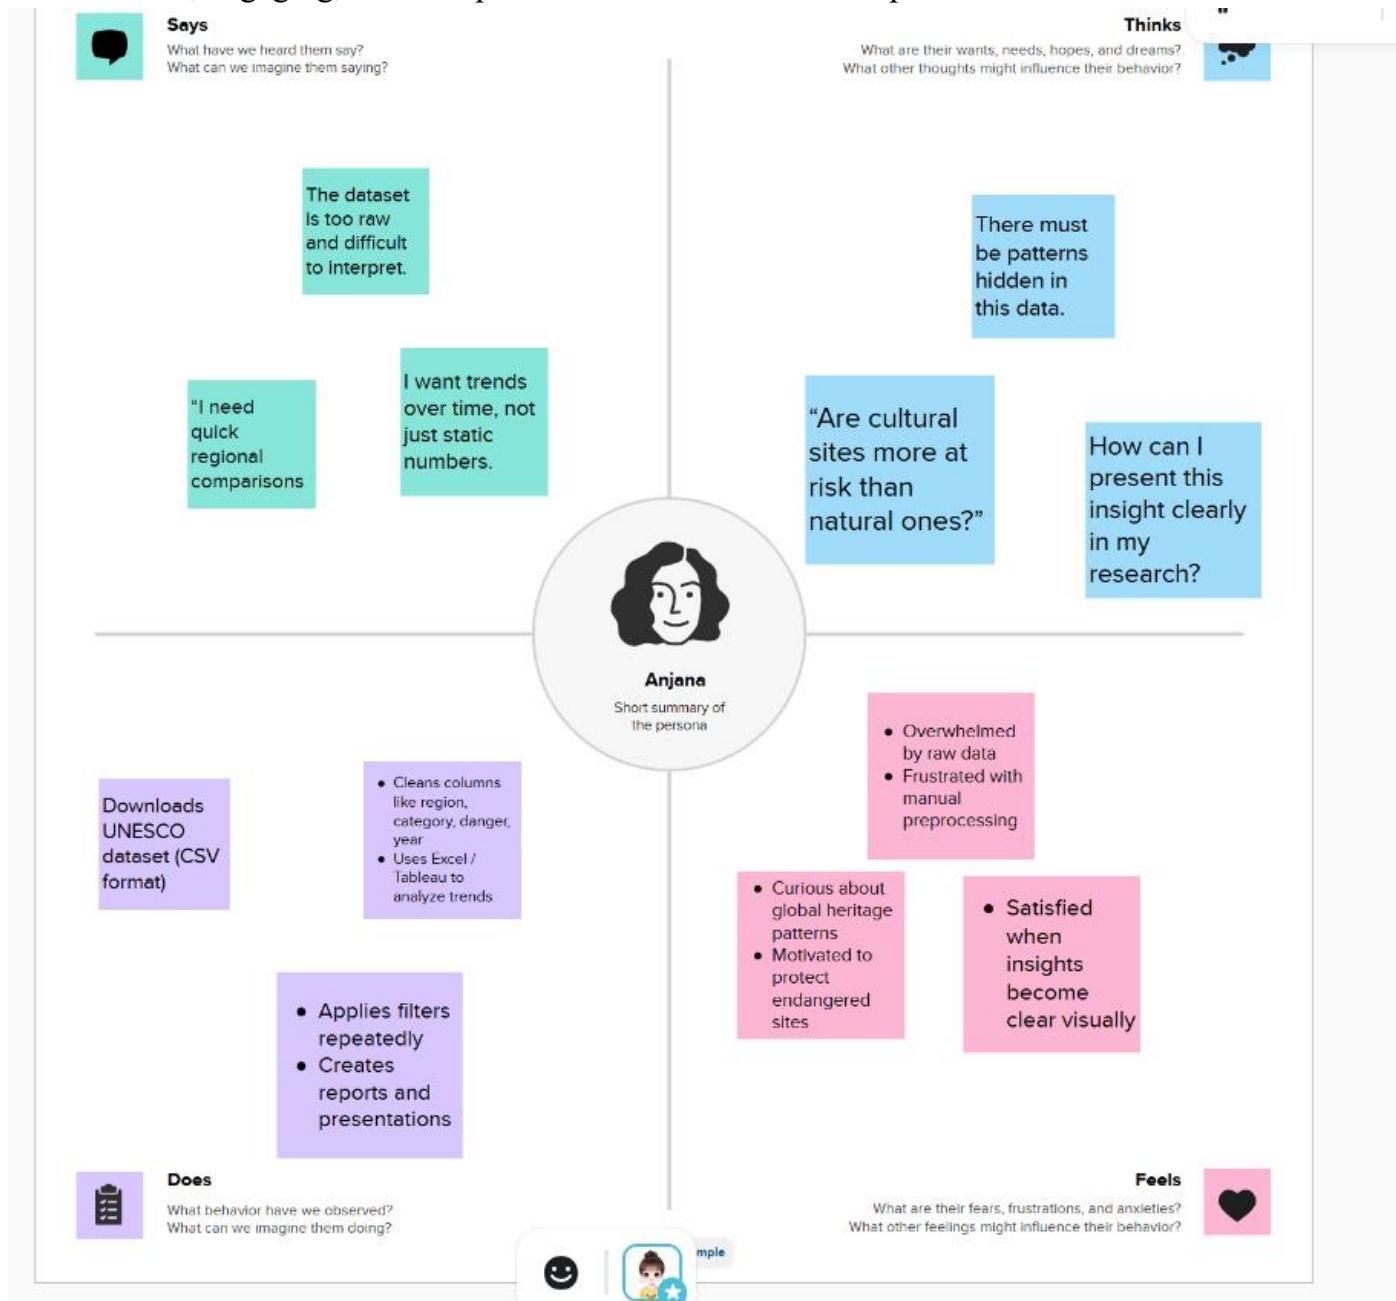

To build a data visualization dashboard that helps analyze UNESCO World Heritage Sites by country, continent, type, status, and year of inscription using Tableau.

2.2 Empathy Map Canvas

We focused on what heritage enthusiasts, educators, and travelers:

- Think & Feel: Curious about history, want to explore diverse cultures
- See: Data in boring tables, hard to understand insights
- Hear: News about endangered sites or new additions

- Say & Do: Look for maps, stats, and visual stories online
- Pain: Difficult to access meaningful information easily
- Gain: A clear, engaging, visual experience that educates and inspires

2.3 Brainstorming

We listed ideas like:

- Creating maps of heritage site locations
- Showing trends over time
- Highlighting endangered sites

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

⌚ 10 minutes

TIP

You can select a sticky note and hit the pencil [switch to sketch] icon to start drawing!

anjana

The current raw dataset format limits trend identification, regional comparison, and risk assessment, reducing its usefulness for data-driven decision-making.

Despite the extensive data available from UNESCO, the lack of intuitive visual exploration tools makes it difficult to identify inscription trends, regional disparities, and sites at risk. Without interactive dashboards, stakeholders cannot efficiently derive actionable insights from the data.

ramesh

The absence of interactive data visualization for UNESCO World Heritage Sites restricts policymakers and conservation bodies from identifying high-risk regions, monitoring inscription growth, and allocating preservation resources effectively.

While UNESCO provides comprehensive heritage site data, its tabular format poses challenges for comparative analysis, temporal trend evaluation, and geographic distribution assessment. A visual analytics approach is necessary to transform complex datasets into meaningful research insights.

jithendra

There is a gap between the availability of UNESCO World Heritage Site data and stakeholders' ability to interpret it effectively. Raw datasets do not provide clear insights into regional growth, risk exposure, or country-level distribution, highlighting the need for an interactive Tableau-based analytical dashboard.

Although UNESCO maintains a global database of heritage sites, the absence of dynamic visualization tools limits stakeholders' ability to detect historical trends, regional inequalities, and endangered site concentrations. This creates a barrier to informed conservation planning and strategic heritage management.

-

3. REQUIREMENT ANALYSIS

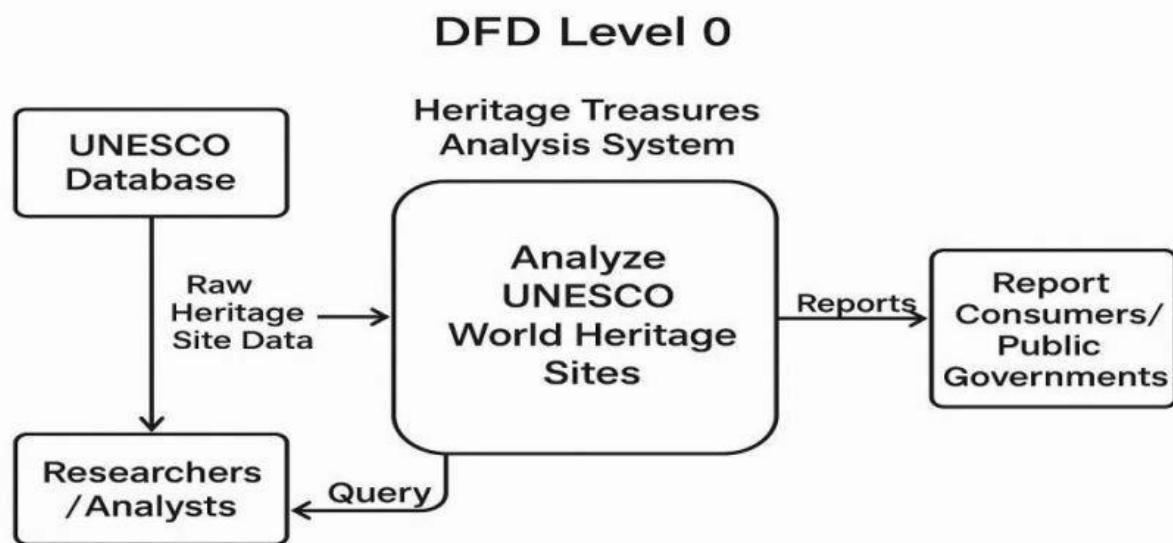

3.1 Customer Journey Map

Stage	Action	Tool	Emotion	Opportunity
Discover	User finds our dashboard	Tableau Public	Curious	Impress with visuals
Explore	Filters by country/type	Filters	Engaged	Add story sections
Learn	Sees endangered sites	Graphs	Surprised	Promote awareness
Share	Shares dashboard	Link	Proud	More reach & impact

3.2 Solution Requirement

- Dataset of UNESCO heritage sites
- Tableau for dashboard creation
- Charts: maps, bar charts, line graphs, pie charts
- Filters: country, type, year, status

3.3 Data Flow Diagram

3.4 Technology Stack

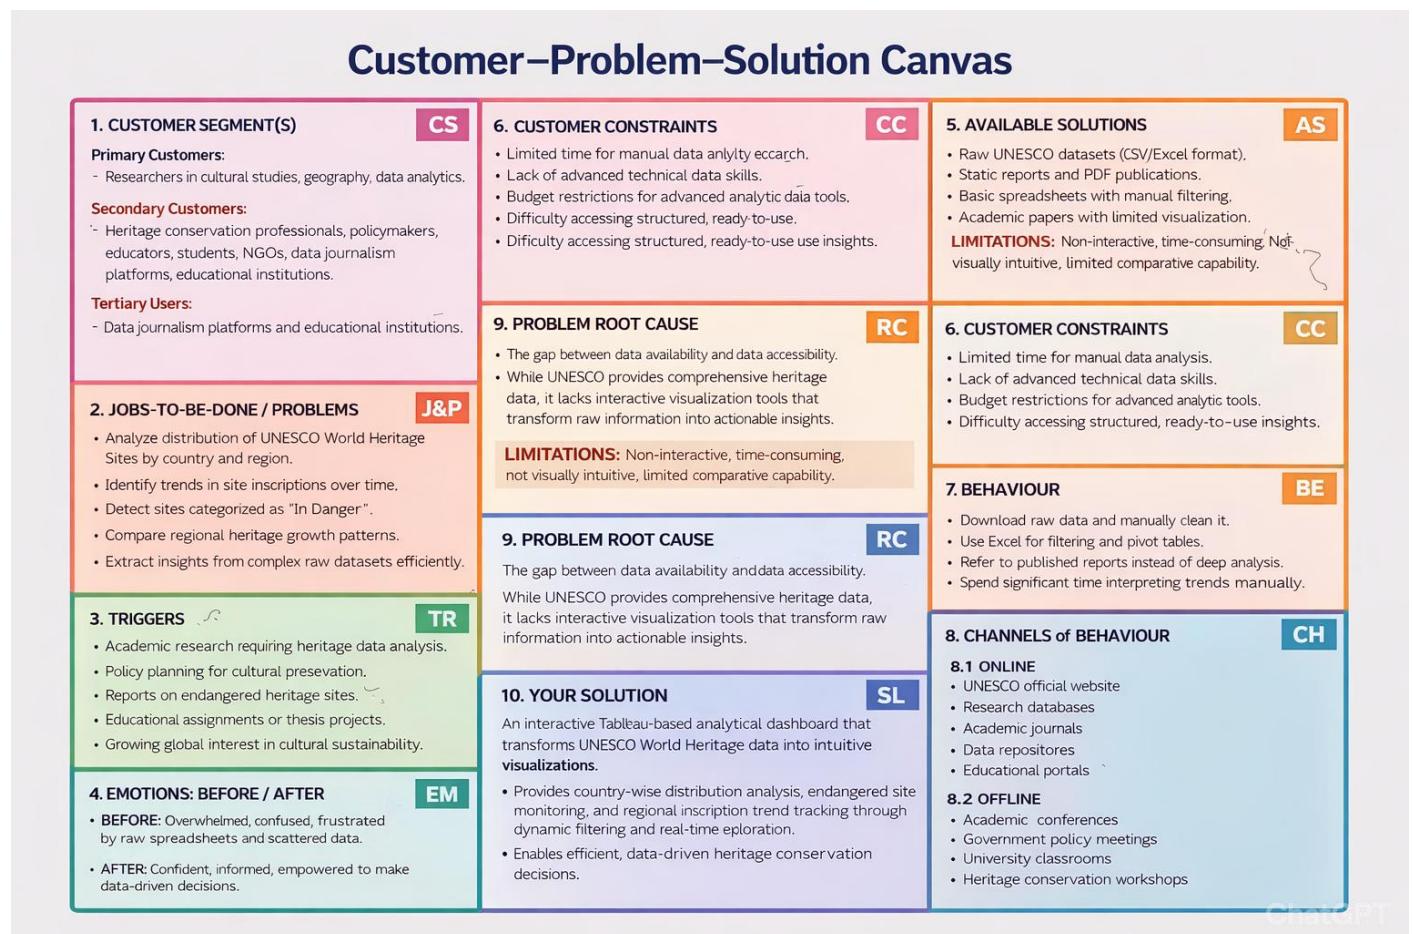

- **Frontend:** Tableau Public, python
- **Backend:** flask(data-based project)
- **Preprocessing Tool:** Excel / Google Sheets

• **DataSource:** <https://www.kaggle.com/datasets/ujwalkandi/unesco-world-heritage-sites/data?select=whc-sites2019.csv>

4. PROJECT DESIGN

4.1 Problem-Solution Fit

The problem was that raw heritage site data was hard to interpret. The solution was to make it interactive and visual, helping users understand it easily.

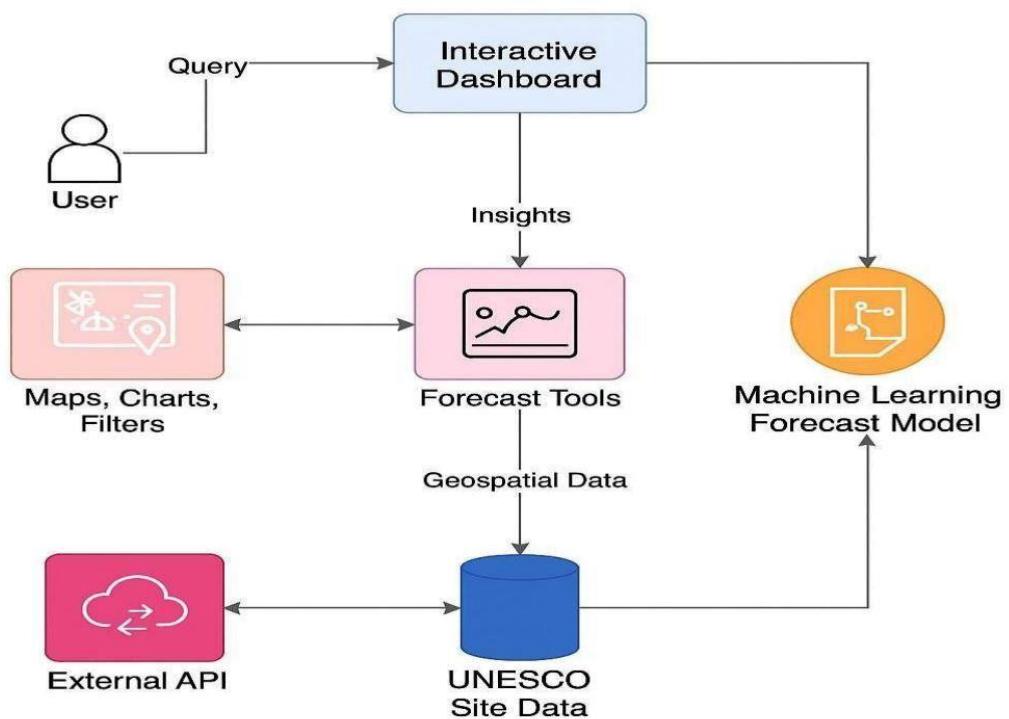

4.2 Proposed Solution

An interactive Tableau dashboard that shows insights such as:

- Number of heritage sites per country
- Growth over time
- Endangered sites
- Cultural vs Natural site comparisons

4.3 Solution Architecture

- Data collected from UNESCO
- Preprocessing to clean and prepare
- Imported into Tableau
- Dashboards created using maps, filters, and charts
- Published on Tableau Public for public access

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Week Task

- 1 Data Collection and Understanding

- 2 Data Cleaning and Preprocessing
- 3 Creating Dashboards in Tableau
- 4 Designing Story Slides
- 5 Final Testing and Review
- 6 Documentation and Report Writing

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	1 Day	9 feb 2026	10 feb 2026	20	10 feb 2026
Sprint-2	20	1 Day	10 feb 2026	11 feb 2026	18	14 feb 2026
Sprint-3	20	6 Days	12 feb 2026	16 feb 2026	19	16 feb 2026
Sprint-4	20	6 Days	17 feb 2026	20 feb 2026	20	19 feb 2026

6. FUNCTIONAL AND PERFORMANCE TESTING

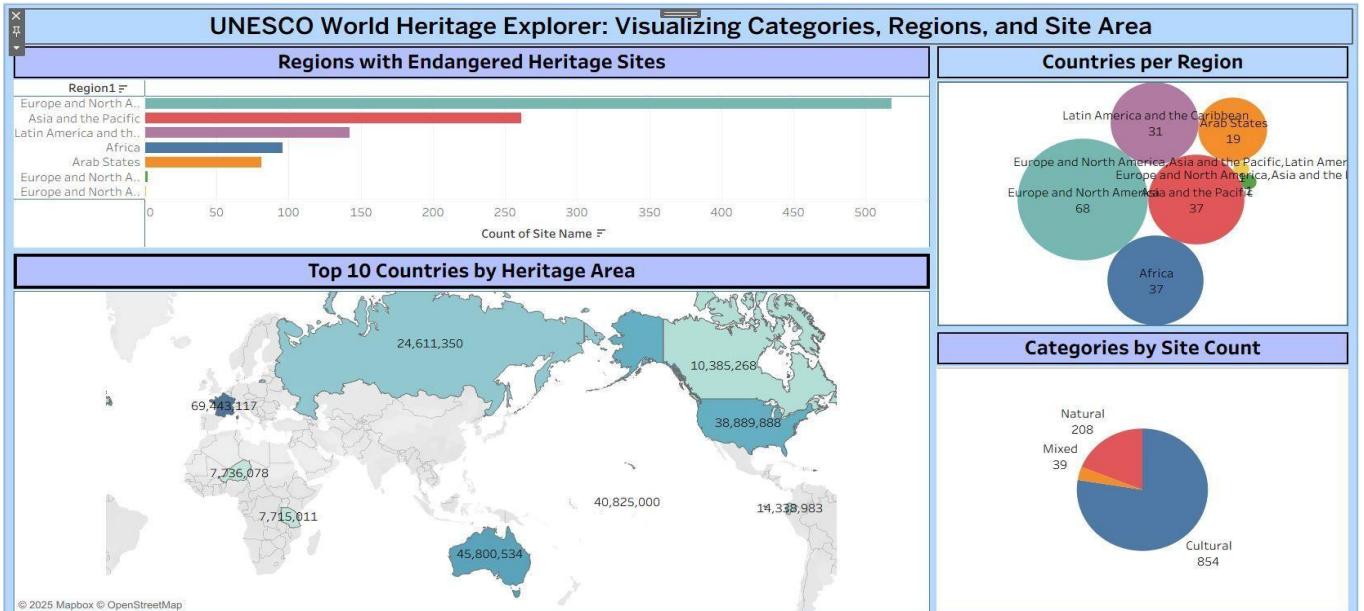

6.1 Performance Testing

We tested the dashboard on different devices and browsers. It loaded quickly and worked well. Filters and visuals responded smoothly, and no lag was noticed.

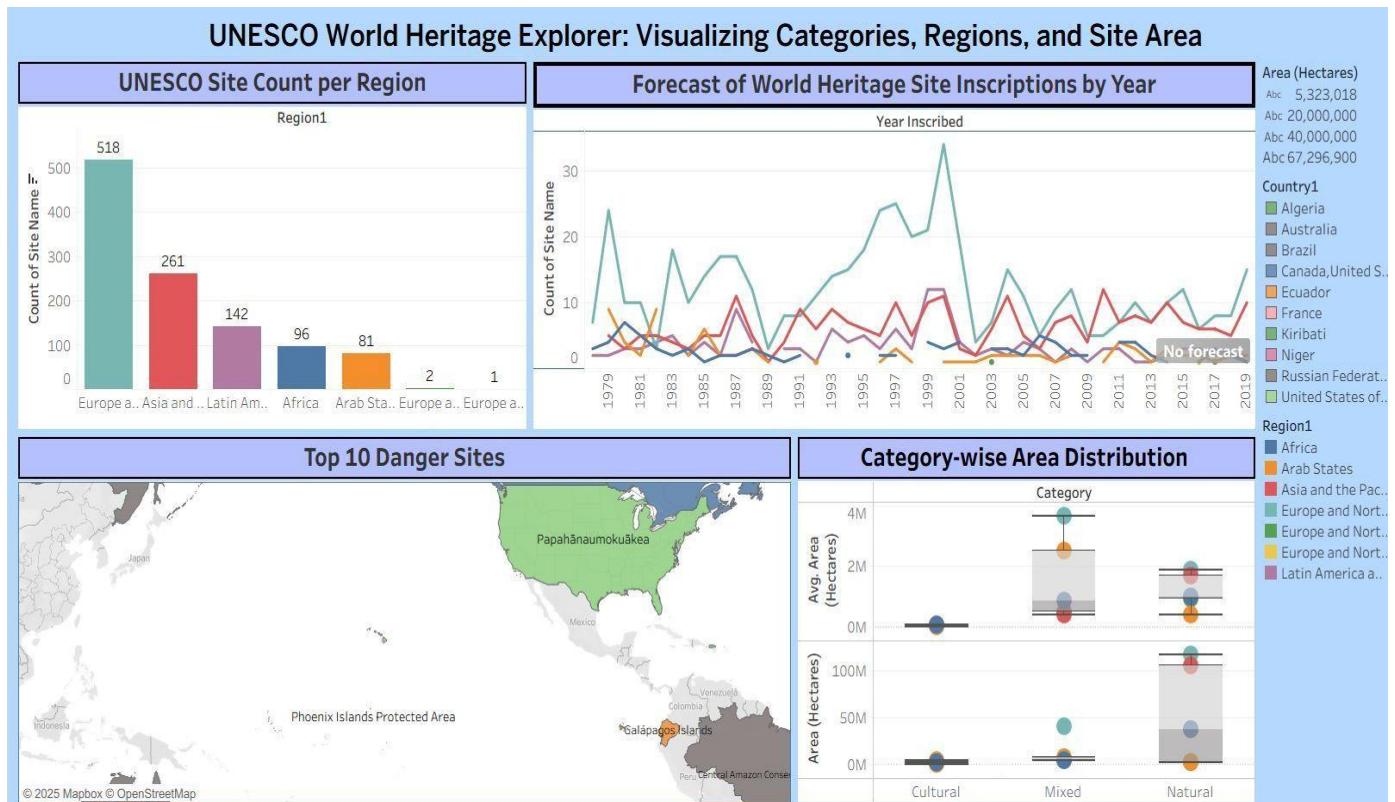

7. RESULTS

7.1 Output Screenshots

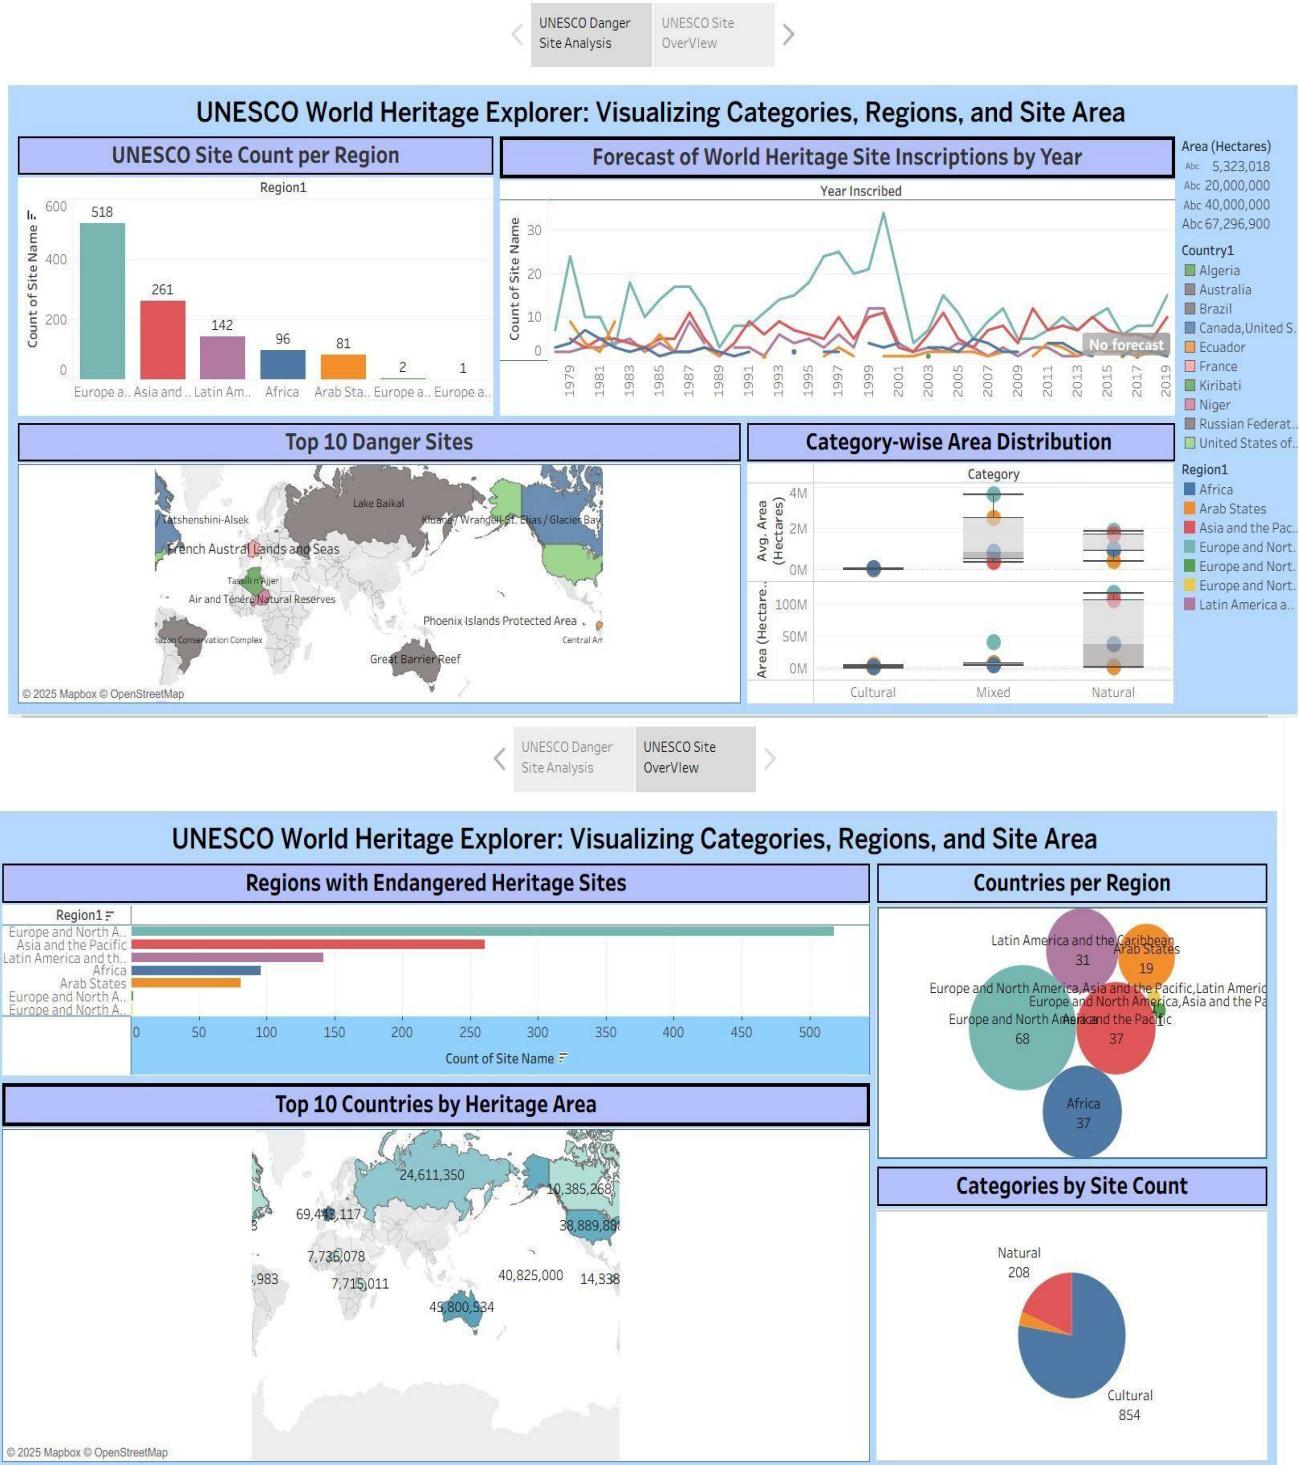

Dashboard-1

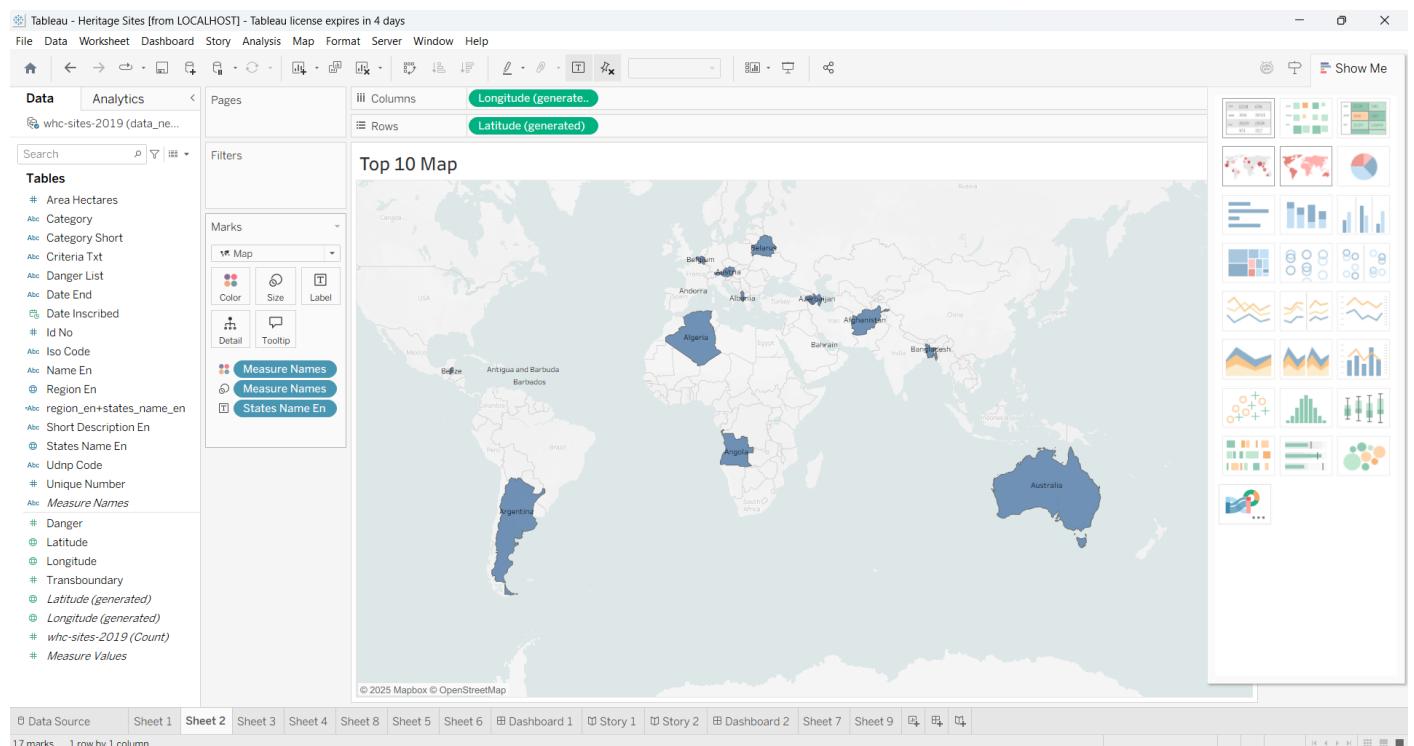

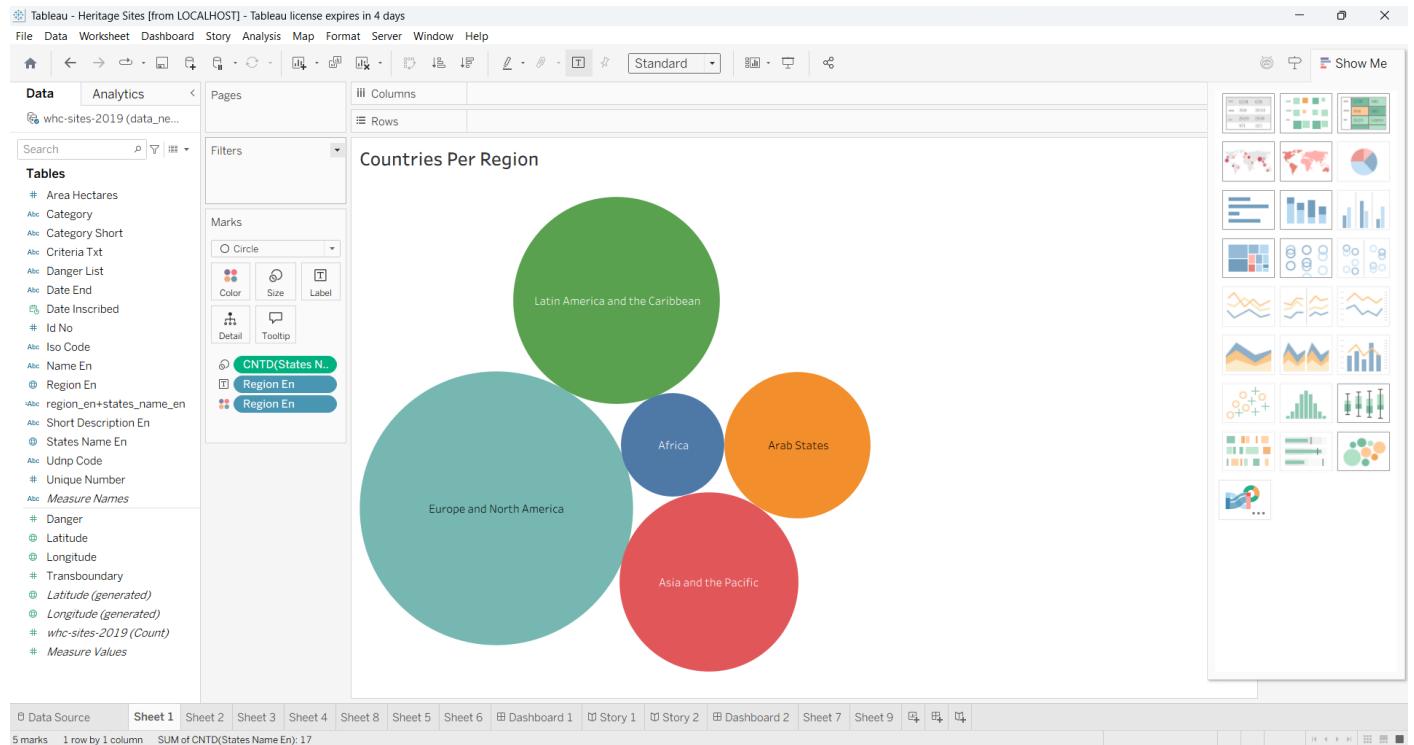

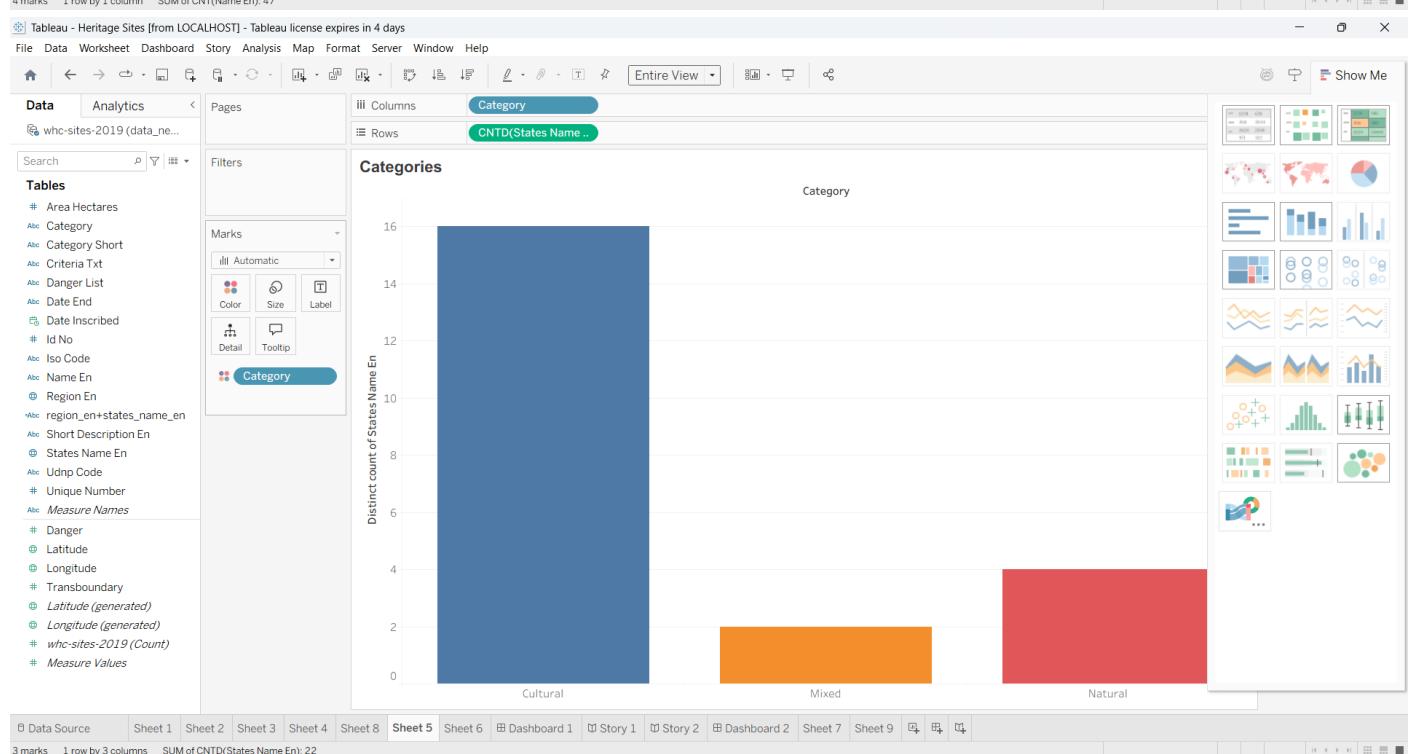

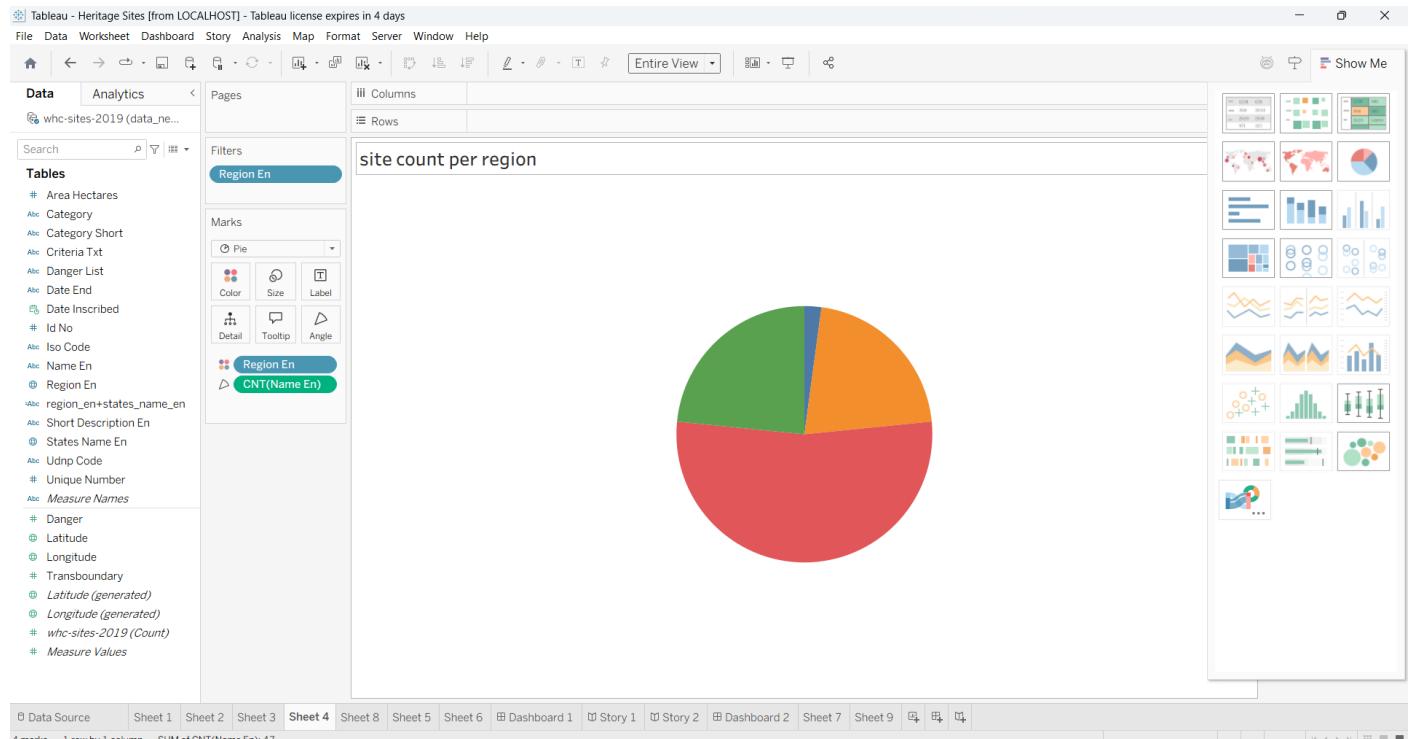

Dashboard-2

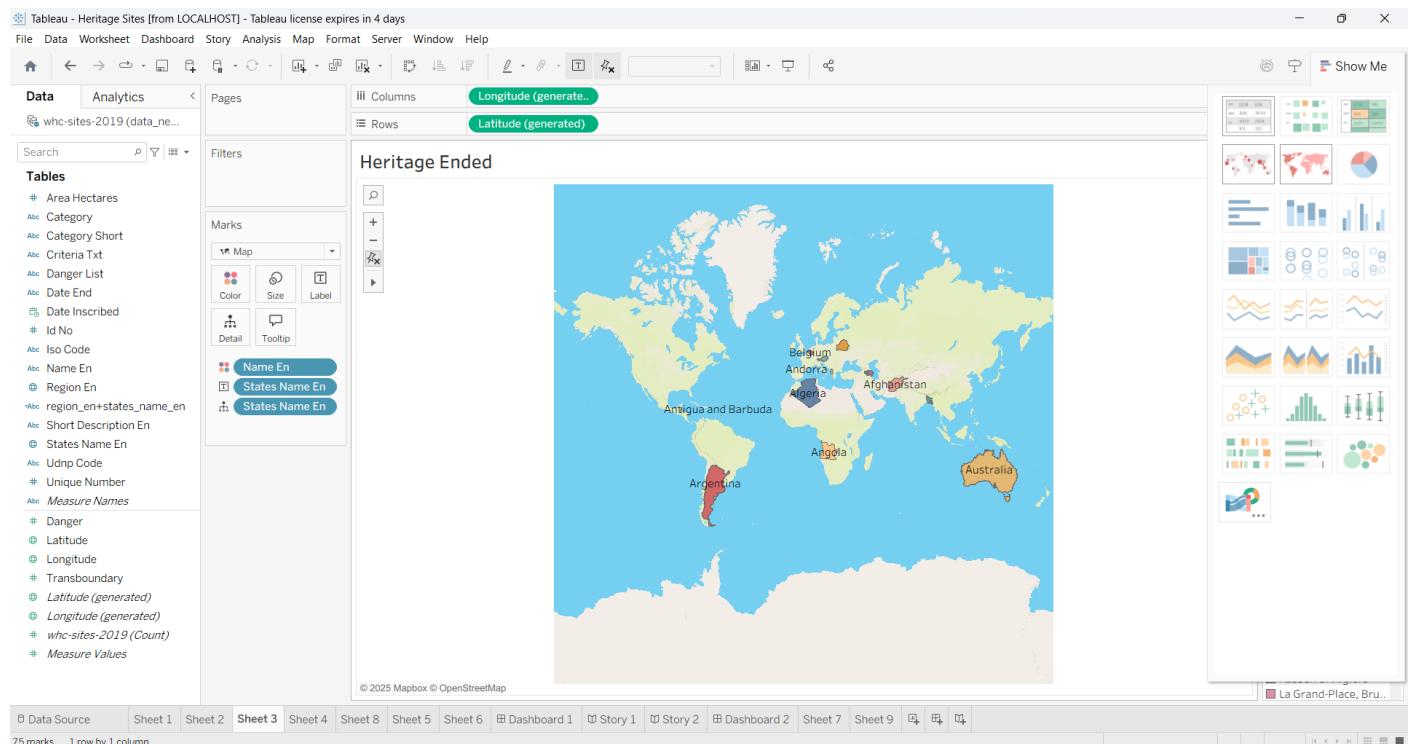

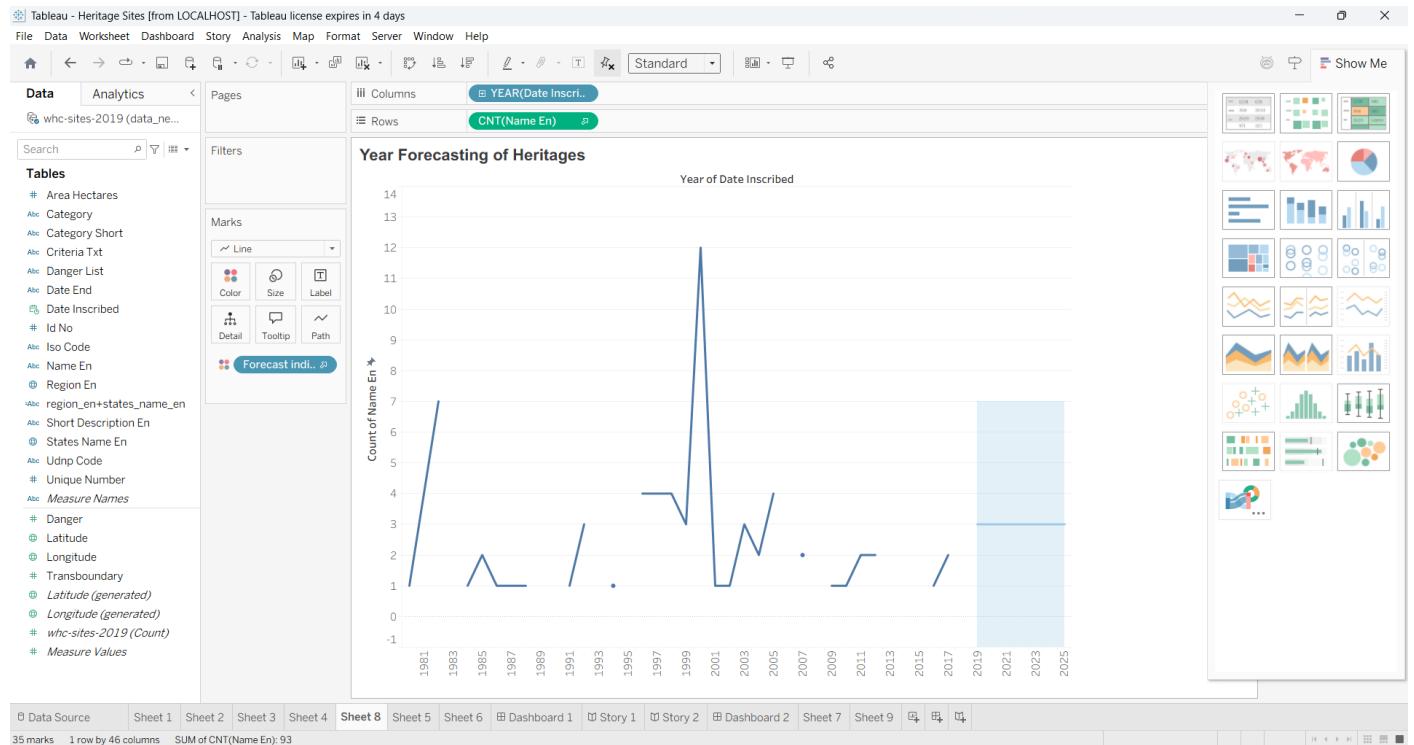

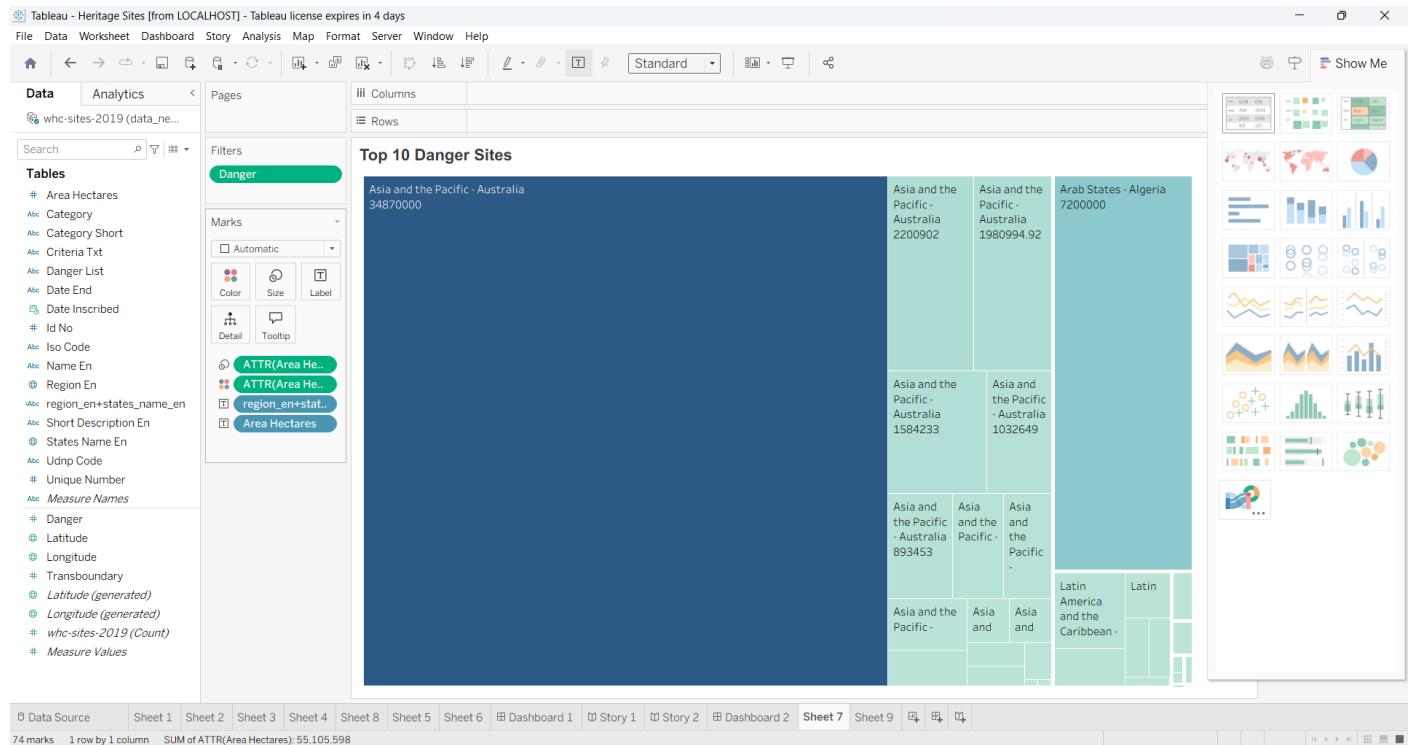

Story

8. ADVANTAGES & DISADVANTAGES

Advantages

- Easy to understand visual data
- Interactive filters for personalized views
- Helps raise awareness about endangered sites
- Can be accessed publicly and shared

Disadvantages

- Static dataset (not live updating)
- No prediction or AI involved
- Depends on the accuracy of source data

9. CONCLUSION

The project successfully transformed a raw heritage dataset into a rich, interactive visual experience using Tableau. Users can now explore, learn, and appreciate world heritage more easily. This project shows how data science can help in promoting culture and history.

10. FUTURE SCOPE

- Add real-time data updates using APIs
- Include images or videos of sites
- Build a mobile-friendly version
- Enable AI-based recommendations or predictions
